

Open catalog interface.

With the OCI (open catalog interface), we are enabling you to connect your ERP system, e.g. SAP, with our online shop quickly and easily. We are thus helping you to accelerate and optimize your workflows in purchasing.

What is OCI?

OCI is a standardized interface developed by SAP AG for transferring catalog data records from web catalogs to the ERP system. It enables you to open the Faber online shop directly from your ERP system and transfer shopping basket data to your system for the ordering process. This interface is supported by many other providers of ERP systems besides SAP.

OCI.

Success needs good connections.

Contact.

Using the OCI service is free of charge and easy and uncomplicated to do. If you are interested, you are welcome to contact our OCI specialist. He will explain the process to you, and answer any question you may have.

The interface for individual requirements.

Individual specifications.

OCI can hand over pre-defined values (e.g. prices, lengths, etc.) for your orders to the ERP system beforehand.

Transfer.

All the important data are transferred to your system automatically – the perfect interface between our online shop and your ERP software.

Efficiency.

Greater efficiency in your internal purchasing process.
